

TURNED PARTS

The production of turned parts to customer-specific drawings and precisely defined quality requirements are the daily challenges for our turning technology team.

Bruse processes various brass alloys, dezincification-resistant and lead-free brass, gunmetal, free-cutting steels, stainless steel and aluminium.

- Production of turned parts from drawn rods up to \varnothing 65 mm
- Production from rod sections or drop forging made of brass or aluminium
- (max. \varnothing 250 mm, 500 mm length and 6,000 g)
- Assemblies according to customer requirements
- Fittings for gas applications

Optimized blank weights form the basis of the respective manufacturing and machining process, whereby our multispindle/single-stem and CNC turning technology is used, which ensures the highest quality.
